

React

dinsdag 8 oktober 2019

13:17

29

Return `React.createElement('div', null, 'h1', 'Hi, I\'m a React App')`

Configuration for the div = second element

Children in div = third element h1 zal al tekst tonen voor een tag H1 moet je een nieuwe element creëren

Voor css kan je het in null => `{className: 'App'}`

This is the reason that we use JSX (does like html)

30

In html is het class maar bij jsx is het className

Het moet 1 root element hebben in return dus `<div></div>` `<h1></h1>` zal niet werken

```
src > JS App.js > ...
 1  import React, { Component } from 'react';
 2  import './App.css';
 3  import Person from './Person/Person.js';
 4
 5
 6  class App extends Component {
 7    render() {
 8      return (
 9        <div className="App">
10          <h1>Hi, I'am a React App</h1>
11          <button>Verander naam</button>
12          <Person name="Cansu" age="21">Test children</Person>
13        </div>
14      );
15    }
16  }
17
18  export default App;
```

```
18   export default App;
```

```
import React from 'react';
```

```
//function
```

```
const person = (props) => {
```

```
  //return <p>I'm a person and I am {Math.floor(Math.random()*30)} y
```

```
  return (
```

```
    <div>
```

```
      <p>I'm {props.name} and I am {props.age} years old!</p>
```

```
      <p>{props.children}</p>
```

```
    </div>
```

```
  )
```

```
};
```

```
export default person;
```

2)

```

The screenshot shows the VS Code interface. On the left, the 'EXPLORER' sidebar displays the file structure of a project named 'SECTIE9EXPENSIFY'. The 'public' directory is expanded, showing files like 'bundle.js', 'bundle.js.map', 'index.html', 'styles.css', and 'styles.css.map'. The 'webpack.config.js' file is open in the editor, showing a configuration for Webpack. The code defines a path, imports 'ExtractTextPlugin', and sets up the entry, output, and module rules for the bundling process.
